

SPOTLIGHT

PHYSICAL EDUCATION SPACE AND WET LAB

A Space Fit for the Future

Our educational spaces need to reflect the technologies and facilities that graduates will encounter throughout their careers. With your support, the School of Education can create a new multi-purpose gym and wet lab, a space in which teacher candidates can create, share, and apply knowledge as they help shape young minds.

Over the last ten years, the School of Education has grown significantly, and so has our need for teaching and learning spaces. Our vision is to create a multi-purpose space that will encourage cross-disciplinary and community collaboration. For example, the gym will also function as a performance space where drama teacher

candidates can write, stage and perform their annual productions.

The new gym will be equipped with a climbing wall, drop-down video screen, audio/visual (lectern) equipment, stage blocks, and more to encourage a range of activities such as health and physical education teaching, performing arts teaching, and events.

The multi-purpose classroom and wet lab will be a game-changer as we prepare teacher candidates to inspire future generations to pursue opportunities in the important fields of Science, Technology, Engineering, the Arts, and Math (STEAM).

Together we can ensure that our future teachers enter the education profession with confidence and a breadth of knowledge and experience to continue elevating the teaching profession.
